

Project Title:
Date: 9/29/17

Group Members:
Alicia Kim
Valerie Hernandez
Michelle Chan

Description:

We will look at the marriage rates from various parts of the country. We will study various different factors: where are the most people getting married? What ages are they getting married at? When are they starting families? What are the trends in attitudes towards marriages? What factors in certain areas might be correlated to increased marriage rates? Is there a general upward or downward trend in marriage rates in general? In certain states?

In particular, we would like to explore where marriage prospects are the best by looking at a combination of the topics mentioned above.

Potential Data Set:

We will look at potential data sets like the [CDC](#) and [Pew Research Center](#) and [The US Census Bureau](#).
